Profile

Computer Science co-op student at UPEI with hands-on experience building data-driven web applications, troubleshooting system issues, and producing clear technical documentation. Detail-oriented and comfortable working with structured data, validating inputs, and supporting end users. Eager to contribute to enterprise HR systems operations and support a major system transition at Veterans Affairs Canada.

Education

Bachelor of Science – Computer Science (Co-op Program), Minor in Mathematics **Expected: December 2028**

University of Prince Edward Island, Charlottetown, PE

Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Database Systems, Web Programming, Linear Algebra

Technical Skills

Languages: Python, Java, JavaScript, SQL, HTML5, CSS3 **Tools:** Git, GitHub, VS Code, IntelliJ IDEA

Concepts: REST APIs, data validation, system troubleshooting, technical documentation, version control, software testing

Projects

Personal Finance Dashboard – React / Express / OpenAI 2026

- Built a full-stack web application with a React frontend and Express backend, featuring validated transaction entry, persistent JSON storage, REST API endpoints, summary metrics, category-based spending reporting, and delete functionality.
- Designed and implemented data validation logic to ensure accurate and consistent records – directly applicable to HR data quality and system integrity work.
- Integrated OpenAI API to provide AI-generated financial analysis, demonstrating ability to connect third-party systems and handle API responses reliably.
- Maintained clean, documented, version-controlled codebase using Git throughout development.

Real-Time Energy Monitoring Dashboard – HackWithSMCS 2026 Jan 2026

- Built a full-stack application (Python backend, React frontend) consuming live data via REST APIs; diagnosed and resolved data flow failures through systematic debugging.
- Produced documentation to support future development and team handoff – mirrors change management and rollout documentation practices.
- Delivered a working product collaboratively using Git under a strict deadline.

Astronomy Equipment Store Simulation – Python / OOP Summer 2025

- Implemented input validation and exception handling to ensure reliable system behavior; wrote documentation covering functionality and testing procedures.

Work Experience

Grocery Clerk – Atlantic Superstore, Charlottetown, PE May 2025 – Sept 2025

- Resolved customer issues professionally in a high-volume environment; managed competing priorities while maintaining accuracy and attention to detail.
- Communicated clearly with a wide range of people, adapting explanations to different levels of understanding.

Professional Development

Wavemakers Innovation & Leadership Program – Graduate Feb 2026

- Completed structured team challenges requiring problem analysis, solution documentation, and stakeholder presentations – directly applicable to change management and communication support.

Availability & Eligibility

- Available full-time September – December 2026; currently enrolled at UPEI (meets program eligibility)
- Eligible for Reliability Status security screening; police certificate from country of origin available
- Authorized to work in Canada on a co-op work permit through UPEI's accredited co-op program
